

Sewer Camera & CCTV Video Inspection Services

CCTV Pipeline Inspection, Cleaning & Survey Report: This service employs cameras and robotic crawlers to inspect the interior of pipelines, detecting blockages, cracks, structural issues, root intrusions, and debris buildup. The inspection includes 360-degree color imaging with pan and tilt capabilities. Post-inspection reports provide photos, videos, and detailed notes.

Services:

- **Pipeline Inspection & Cleaning with report:** Inspection to Identify blockages with cleaning to maintain a smooth flow with post inspection reports including photos, videos, and detailed notes.
- **Culvert Inspection:** Ensuring proper water flow and preventing clogs and structural damage using CCTV cameras. Used in infrastructure maintenance for roads, highways, and railways.
- **Sewer Line Inspection:** Inspecting sewer lines and drainpipes with high-resolution cameras to detect blockages, root intrusion, and pipe deterioration. Essential for industrial, commercial, and municipal systems.
- **Mainline Sanitary and Storm Sewer Assessment with Report:** Comprehensive assessment of sanitary and storm sewer mainlines using CCTV technology, including a detailed report on their condition. Used by municipalities and essential for regulated waste facilities, chemical plants, and industrial complexes.
- **Landfill Leachate Line Inspection:** Evaluating and maintaining the leachate collection and removal system (LCRS) within landfills to prevent environmental contamination.
- **Manhole Inspection:** Detailed inspection of manholes to assess their condition and identify any necessary repairs.
- **Hydro Jetting:** High-pressure water jetting to clear blockages and clean pipes before inspection.

Where these services are needed:

Manufacturing Plants: CCTV pipeline inspection, cleaning, and survey reports to keep production lines running smoothly.

Chemical Facilities: CCTV pipeline inspection and landfill leachate line inspection to prevent hazardous material buildup and ensure environmental compliance.

Water Treatment Plants: Sewer line inspection and mainline sanitary and storm sewer assessment with reports to maintain treatment equipment and infrastructure.

Energy Plants: CCTV pipeline inspection and culvert inspection to ensure efficient operation of boilers, turbines, gas headers, and other machinery.

Municipalities: Sewer line inspection and mainline sanitary and storm sewer assessment with reports to support city infrastructure with regular maintenance and emergency response.

Construction Sites: Culvert inspection, cleaning, and survey reports for site preparation and utility location.

Industrial Facilities: CCTV pipeline inspection, cleaning, and survey reports for cleaning and maintenance of industrial sewer systems.

Environmental Firms: Landfill leachate line inspection and sewer line inspection for site remediation projects.

Oil & Gas Industry: Landfill leachate line inspection and mainline sanitary and storm sewer assessment with reports to ensure the safety and reliability of pipelines and storage facilities.

Utility Companies: Sewer line inspection and culvert inspection to ensure the safety and reliability of water, gas, and electrical lines.
